

IMPORTANT

THIS PEDAL USES A PSA 120-T MODEL (BOSS) (OR EQUAL)

OLD MODEL OR NEW MODEL

I hope you like the (Brown Edge Boost)

A quick note about the Brown Edge Boost pedal.

I don't know how much you know about boosters so I'll just give you a quick starting point. All guitar pickups react differently to the Boost so start off with guitar volume pot wide open and the boost pedal at the 11:00 position. *You may (depending on the pickup) have to roll the guitar volume pot back a bit to dial in and keep the tone you like* and the most common place for best results in the pedal chain is at the end of effects chain. But not written in stone. I find most pickups you will end up with the volume knob turned back just a bit (from 8-10) from wide open and the Boost Pedal between 11:00 and 1:00 . Especially on humbucker (double coil) pickups you may want to roll back even farther.

The Brown Edge Boost unlike the Cream Boost will change the tone to a heavier fat tone.

Hope you like it.

If you have any problems with the pedal please contact me. I stand behind my pedals.

And if the pedal does workout for you could you please visit my website and leave a comment at www.trachouse.com

Thanks

Dave

If you are planing on using the 9 volt battery snap in side the pedal. It will be a tight fit but it will fit.

And please remember to check the battery often. The pedal starts to break up a little bit with a low battery. It is better for sure to use the AC/DC adapter. The battery snap was installed as an added convenience for quick jobs to save AC/DC

adapter space on pedal board space when needed.
